Microsoft 365's four pillars of enterprise security

Microsoft 365 E5 enables customers to digitally transform by unifying user productivity and enterprise security tools into a single suite that enables the modern workplace.

It also delivers holistic security that is aligned to four pillars, each one helping enterprise businesses secure corporate data and manage risk in today's mobile and cloud-first world.
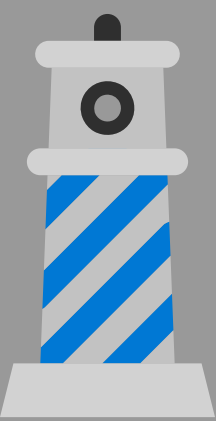

Identity and access management

Protect users' identities and control access to valuable resources based on user risk level.

Information protection

Ensure documents and emails are seen only by authorized people.

Threat protection

Protect against advanced threats and recover quickly when attacked.

Security management

Gain visibility and control over security tools.
